

My Website In 2003 Has Been Recovered Online

The site was built up with ASP + Microsoft Access Database. I searched around on Internet for free ASP hosting space, but didn't get anything good. In order to present the site in three years ago, I therefore decided to convert all asp files to php so that I could host it on my current linux space.

It didn't take too long to do the conversion work since the site was not big anyway. One pity is that the files which I got on my hard disk are not the latest ones. So some sections on the site such as Experience and Favorite are missing. In fact in the Experience section, I listed all my past IT projects with descriptions, images, and demo systems. But now they are all gone and there seems no way for me to get them back. What a pity.

The site can be viewed at <http://www.bailianjun.com/forerunner-net/default.php>

I should always remember to do the backup for saving future regrets.
